

International Association for Solar Cooling (IASC)

Incorporating Association Internationale pour le Refroidissement Solaire 2017

“To embrace, empower, enable, engage and enlighten the environment.”

www.IASC17.org

Preliminary Notice **World Congress 2020** **‘One Cool World’**

Feb 5, 2019 -- A **Call for Papers** for a **2020 World Congress on Solar Cooling and Refrigeration** has been announced by the IASC. Acceptance of papers will begin **April 15, 2019**. Closing date is **February 5, 2020, 17:00 GMT**.

IASC

Our association is a connector, educator and facilitator for a better future using technology, and embracing and encouraging **“change in Solar Cooling.”**

We achieve this by:

- education
- via our Membership – innovation and research
- World Congress

Organizations and Institutions

interested in active participation and potential **Sponsors** and **Commercial Exhibitors** interested in being a part of the **2020 World Congress on Solar Cooling and Refrigeration** can contact Congress Convener Robert Quimby. rquimby@solarcoolingcongress.org

The CONGRESS is also inviting submissions on **Integrating Passive Cooling**

The **IASC World Congress** will be held in Australia’s national capital, Canberra, A.C.T. September 25-27, 2020.

Full details will be on a new **World Congress** website beginning March 2019 and in **IASC’s eNewsletter** for the month of March 2019.

The IASC Website notes:

“There are so many ways to generate cold without burdening the power grid, without expending more heat into the streets (something to be minimized and then eliminated) and without financially penalizing the billions of people living where both temperatures and energy prices are on the rise. There is knowledge to be disseminated, support to be shared and work to be done.”

Invitations are extended to leading academics, architects, designers and engineers to present their case studies and research and invite submissions and participation from all committed to Solar Cooling and Refrigeration. We are also inviting leading professional membership organizations and research institutes such as ASHRAE, CSIRO, the Rocky Mountain Institute, universities, institutes and others engaged in energy, solar and cooling engineering -- bringing everyone together with media, government, industry, the public and each other.

Challenge for us all

In Sir Richard Branson’s announcement last year of his \$3million prize for innovative Solar Cooling technology, he reminded us:

“Billions of people are at risk of exposure to increasingly dangerous heat conditions. They need access to cooling, but without warming the planet.”

The CONGRESS is also inviting submissions on **Advances in Cooling Science**

Beginning March 2019 follow Congress preparations on www.SolarCoolingCongress.org
